EDUCATION

Georgia Institute of Technology
Candidate for B.S. in Computer Science

Expected Dec 2026
3.90 GPA, Provost Scholar (1 of 60 recipients)

EXPERIENCE

Citadel Jun 2026 – Aug 2026
Software Engineer Intern New York City, NY

- Extended Citadel Equities' context-linking system to research tools and standalone charts, leveraging existing gRPC and browser messaging infrastructure to support live context syncing across desktop and web environments
- Built automatic ticker synchronization across the Equities app suite, reducing repetitive lookup and manual updates as analysts move between portfolio management, research, and charting apps during investment workflows
- Expanded the research app beyond watchlist-scoped workflows, adding comparison and charting capabilities for analyst- or coverage-based viewing modes, arbitrary ticker lookup, and deep links to prefill tool inputs and app state
- Shipped additional features including 3 new standalone chart types, internal directory group search, streamlined watchlist creation in the research app, support for a legacy app decommission, and other features for user requests

Stripe Jan 2026 – May 2026
Software Engineer Intern Seattle, WA

- Led customer-facing experiment for a new onboarding form, owning product design, development, and analytics instrumentation; tested with tens of thousands of new Stripe merchants and later permanently adopted
- Drove refactor of onboarding forms to a content spec-driven approach that dynamically generates JSON form definitions for collecting user requirements; authored docs for my team to continue adoption across other forms

Amazon Web Services (AWS) May 2025 – Aug 2025
Front-End Engineer Intern Arlington, VA

- Built an interactive drag-and-drop playground using React/TypeScript for AWS Fault Injection Service (FIS) users to assemble cloud architectures and simulate fault injection using mocked resources prior to real-world testing
- Validated customer assumptions for the new playground via think-aloud usability studies with 25 tech professionals who use AWS, assessing FIS awareness, sentiment toward the new feature, and UX intuitiveness

PROJECTS

Orbit Wars (Kaggle) | Rust, Python May 2026 – Jun 2026

- Ranked 74th out of 4,729 teams (10,196 entrants) in Kaggle's Orbit Wars simulation competition, writing algorithms for a turn-based, multiplayer strategy game involving coordinating and routing fleets of spaceships on a rotating map

Cambridge Battlecode | Python Mar 2026 – May 2026

- Won the Grand Finals (1st out of 587 teams, 1,518 players) in an AI programming competition hosted by the University of Cambridge; also received the Best Postmortem award for our strategy writeup
- Wrote algorithms for autonomous robot players to play a turn-based strategy game involving robot coordination, resource management, territory control, and adversarial planning under partial information

MIT Battlecode | Java Jan 2026

- Placed Top 6 at the US Qualifiers and Top 12 at the Finals as a solo contestant (out of 657 teams, 1,165 players) in an AI programming competition hosted by MIT; also received the Best Postmortem award

PrivacyPilot | React, JavaScript, MongoDB, Vite, HTML, CSS Oct 2024

- Won the Google sponsor track and Best Use of MongoDB award at the AI ATL hackathon
- Engineered Chrome extension for scanning a website's Terms of Service against GDPR/CCPA privacy standards
- Automated website evaluation by parsing relevant links on the frontend, analyzing documents concurrently through asynchronous HTML scraping and AI calls, and caching results in MongoDB for reduced latency on repeated scans

SKILLS

Languages: TypeScript, JavaScript, Python, HTML, CSS, Java, C++

Technologies: React, Next.js, REST APIs, Jest, React Testing Library, Git, GitHub, Supabase, MongoDB
